

## 82-0.com CHEAT SHEET -- Classic Mode (one page)

Goal: 5 picks totaling OVR  $\geq$  109.4 -> 82-0. That is an average of 21.9 VALUE points per pick. Every decision below is "maximize VALUE", nothing else.

### 1. THE ONLY FORMULA THAT MATTERS

Score every candidate player with his raw season stat line:

$$\text{VALUE} = 0.345 \cdot \text{PPG} + 0.630 \cdot \text{RPG} + 0.614 \cdot \text{APG} + 1.148 \cdot \text{SPG} + 1.250 \cdot \text{BPG}$$

Mental version (within ~2%):  $\text{PPG}/3 + 0.6 \cdot (\text{REB} + \text{AST}) + 1.2 \cdot (\text{STL} + \text{BLK})$

Key per-unit facts:

- 1 rebound = 1.8x a point. 1 assist = 1.8x a point. 1 steal/block = ~3.5x a point.
- NEVER pick by PPG or by raw stat sum (the UI sort). A 25/12/4 big beats a 31/4/4 scorer.
- null STL/BLK (1960s players) is NOT zero -- the engine fills it with your roster average. So a null is BETTER than a low value. A 0.5 stl / 0.2 blk guard actively drags you down; Wilt's nulls cost nothing.

Team result:  $\text{OVR} = \text{sum of 5 VALUEs (with null stl/blk scaled out)}$ ;  $\text{wins} = \text{round}(82 \cdot \min(\text{OVR}/110, 1)^{1.15})$ . 109.4+ OVR = perfect season.

### 2. PER-ROUND DECISION PROCEDURE

- Roll lands on (TEAM, DECADE). Run: `python src/oracle.py TEAM DECADE`
- Find the best ELIGIBLE pick (a position you still have open).
- Compare it to the skip baselines in section 3. Burn a skip if the gap is  $\geq 3$ .
- Otherwise take the pick and place it at the LEAST flexible open slot he fits (see section 4 placement rules).

### 3. SKIP RULES (one team skip + one decade skip per GAME)

Average best pick of a random cell = 19.2. Re-roll EV by what gets locked:

TEAM SKIP (keeps decade, re-rolls team) -- expected new pick by decade: 1970s 20.8 | 1960s 20.4 | 2020s 19.7 | 1990s 19.2 | 2010s 18.6 | 2000s 18.4 | 1980s 18.2

DECADE SKIP (keeps team, re-rolls decade) -- expected new pick by franchise: LAL 23.0 | PHI 21.8 | HOU 20.8 | GSW 20.6 | ORL 20.5 |

SAS/BOS/WAS/NOP/SAC ~19.8 ...worst: MIA 17.7 | TOR 17.5 | CHA 16.9 | MEM 16.6

Burn a skip when (re-roll EV - current best eligible pick)  $\geq 3$ , or any time the current cell is below ~17 and a skip is still unspent in round 4-5. Never finish a game with an unused skip after a below-average roll. On LAL/PHI/HOU/GSW with a weak decade, the decade skip is almost always right.

### 4. POSITION DISCIPLINE (the #1 avoidable mistake)

The jackpot picks are mostly C-only. KEEP C OPEN as long as possible. Keep PG second-longest (Oscar/Westbrook/Luka/Harden class). Dump picks onto SG/SF/PF first.

- Multi-position player: always place at his most-replaceable slot (SG/SF first, then PF). Giannis (PF/PG/SF/C) goes to SF/PF, never C.
- Never put a sub-20 big at C before round 4 unless both skips are gone.

### 5. JACKPOT TABLE -- memorize these (VALUE 22+)

GSW 60s Wilt 32.0 C | LAL 20s Luka 23.1 PG/SG/SF PHI 60s Wilt 28.8 C | SAS 20s Wembanyama 22.9 C MIL 70s Kareem 28.5 C | LAL 00s Shaq 22.8 C LAL 70s Kareem 26.7 C | GSW 70s Thurmond 22.6 C/PF DEN 20s Jokic 25.4 C | MIN 00s Garnett 22.5 C/PF/SF WAS 20s Westbrook 24.2 PG | BKN 20s Harden 22.5 PG/SG HOU 90s Hakeem 23.8 C | SAC 60s Oscar 22.2 PG LAC 70s McAdoo 23.6 C/PF | BOS 60s Russell 22.2 C MIL 20s Giannis 23.5 PF+ | LAL 10s LeBron 22.1 any SAS 90s D.Robinson 23.5 C | NYK 70s McAdoo 22.1 C/PF CHI 80s Jordan 23.5 SG/SF | ATL 60s Pettit 22.0 C/PF DAL 20s Luka 23.4 PG+ | LAL 90s Shaq 22.0 C NOP 10s Cousins 23.4 C | BOS 80s Bird 21.9 PF/SF HOU 80s Moses 23.1 C | SAC 90s Webber 21.8 C/PF ORL 90s Shaq 23.1 C | LAL 60s Wilt 23.1 C

Odds per roll: 17/180 cells (9.4%) hit 23+; 29/180 (16%) hit 21.9+. Skips roughly double your shots. Three 23s + two 20s = 109+ = 82-0.

### 6. WHAT "WINNING EVERY TIME" REALLY MEANS

Perfect play guarantees you never lose value to a decision -- but 82-0 itself is roll-gated: you need ~3 jackpot cells in one game (low single-digit % even played perfectly). Played by this sheet, an average game lands ~95-100 OVR (low-70s wins, A+/HISTORIC) and you bank an 82-0 whenever the slot machine cooperates. There is no pick strategy that forces 82-0 from bad rolls -- value comes from (a) never mis-picking, (b) never mis-placing, (c) spending both skips on +EV hunts.
